Introduction

This program allows you to update the additional information in your Actinic product duplicates if they have been changed in the master product. Product duplicates are available in Actinic versions 7 or later.

When you create an Actinic product duplicate only the price and product reference are changed in the duplicated product when the master product is changed. The update tool can be used to make sure that all of your duplicated products match the master product.

Updating all product duplicates only for products in selected sections

1. Select the section or sections that you want to update all of the duplicates in.
2. Tick *Update from Master Products in Selected sections*.
3. Select all of the fields that need to be updated.
4. Press the *Update Duplicates* button.

Updating all product duplicates in selected sections

1. Select the section or sections that you want to update all of the duplicates in.
2. Tick *Update Duplicate Products in selected sections*.
3. Select all of the fields that need to be updated.
4. Press the *Update Duplicates* button.

Updating all product duplicates in the whole shop

1. Tick *Automatically check sub-sections*.
2. Tick the top of the Catalog tree (*Online Catalogue*).
3. Tick *Update from Master Products in Selected sections*.
4. Tick *Update Duplicate Products in selected sections*.
5. Tick all the fields to update.
6. Press the *Update Duplicates button*.

Additional Features

When you select products you can choose to select single items or automatically check (or uncheck) the relevant parent and child sections (and products). To automatically select the additional sections of the tree check *Automatically check sub-sections*.

To see which products are in a section, double click on a section. The list of products dialog is shown.
